Cristian Răduță

Game Programmer

radutacristian.dev@gmail.com | github.com/raduta-cristian

Education

Babeș-Bolyai University — Cluj-Napoca, Romania
Bachelor of Science in Computer Science — *October 2023 – July 2026*

Babeș-Bolyai University — Cluj-Napoca, Romania
Master in Computer Science, Software Engineering section — *September 2026 - Ongoing*

Experience

Software Engineering Intern — July 2025 – August 2025
AXON Soft — *Cluj-Napoca, Romania*

- Developed, in a team of interns, an internal tool to manage employee PTO
- Used Java Spring Framework to create a REST API for PTO management in a PostgreSQL database
- Implemented JWT Authentication with access and refresh tokens
- Defined an API-calling interface with OpenAPI and Swagger

Projects

Superpower Sandbox | *Unity, C#* | **qris01.itch.io/superpower-sandbox**

- Physics-based super-human flying and fighting game where the terrain can be destroyed, made in Unity with C#
- Implemented responsive character controller, with charged dashing followed by flying, and charged punching
- Implemented Marching Cubes for destructible terrain with both Compute Shaders and Burst Jobs
- Added effects like speed lines with ShaderGraph, destruction dust with a particle system and camera shake

COOP3D | *Three.JS, React, Java Spring, Docker* | **github.com/raduta-cristian/coop3d**

- Created a full-stack web application that allows users to collaboratively model 3D scenes, in real time
- Used React, TypeScript and Three.JS for the frontend Java Spring for backend and PostgreSQL for the database
- Implemented own synchronization solution for concurrent operations, based on Operational Transformation
- Defined 3D operations, like triangle deletion or extrusion, using Three.JS

STOP HAVING FUN! | *Unity, C#* | **qris01.itch.io/stop-having-fun**

- Arcade-like game made in Unity
- The player can shoot colored lasers, and must match the color to the enemies to be effective
- Implemented a wave-system for enemies, that allows for spawning any number and combination of enemies
- Made power-ups that spawn periodically and can be picked up for a specific time

An artist's retreat | *Godot* | **qris01.itch.io/an-artists-retreat**

- Made a farming and painting game in Godot, using free 3D assets
- Using a drawing tablet, or a mouse, the player can draw anything on canvases
- Like drawing, the player can click to plant, water and harvest crops, to make money and buy more canvases
- Created the drawing system, with options for color, brush size and spray style

Track4UBB | *React, Agile* | **github.com/ApyrGeo/Proiect_Colectiv**

- Semester-long group project for college, in a team of 7
- An improved academic tracker app for our university, including faculty, grade, exam and timetable management
- Implemented several frontend features, including a dynamic timetable with filtering and sorting, internationalization, role-protected page routing and faculty management
- Worked in an Agile environment, in 2 week sprints, with a Kanban to manage tasks

Technical Skills

Languages: C#, GDScript, Java, C/C++, SQL, JavaScript/TypeScript, HTML/CSS, Python
Frameworks: React, Node.js, Java Spring
Game Engines: Unity, Godot
Other: Git, Docker, Agile Development
